Acadia

Dear Hoffman Media team,

Thank you for your engagement so far, and for considering Acadia to serve as your analytics partner.

Engagement nature: By choosing to engage with Acadia, you will have an analytics partner aimed at helping you achieve your most important business goals by leveraging your valuable first party data and enhancing it with third party information like demographics. You will have a dedicated team of analytics professionals led by a team lead with experience across all analytics services and a range of industries.

The following pages outline our process and detail our partnership with your organization. Should you have any questions regarding this, please feel free to reach back out to me directly to discuss.

If you engage with us, the next steps are:

- Authorize this agreement
- Kick-off & strategy meetings including team introductions
- Week 1 - Discovery sessions
- Week 2-3 - Data review and quality assurance
- Upon data approval - analysis kickoff

Thank you for your consideration, and we look forward to the potential to partner with your company.

Sincerely,

Seth Hirsch, Partner

Acadia | https://acadia.io

SOW Effective Date: 01 / 05 / 2024 (“SOW Effective Date”)

Agency: Acadia.io LLC (“Agency” or “Acadia”)

Client: Hoffman Media (“Client”)

Agency shall provide the following Services to Client:

Segmentation and Lifetime Value (LTV) Development and Maintenance

Summary: In this part of the scope we will create a distinct customer segmentation model that is built upon your first party data. This model will ingest customer email addresses, billing address, and purchase history, and will then append third party demographic information to enrich the customer segments. Customers will then be grouped into distinct audiences based on similarities and will then become exportable for use across marketing channels.

Creating and maintaining a customer segmentation model enables marketing spend to be optimized specifically to these segments. In addition to segmentation, Acadia will create a Lifetime Value (LTV) model. Higher LTV segments can be prioritized for retention, those same segments can seed lookalike audience expansion across channels, and mid-to-low LTV segments can be prioritized accordingly (i.e. optimized to drive up LTV, or cost-managed to keep cost of acquisition proportional to revenue value).

This managed service will include:

- Discovery and review of all first party data sources to understand opportunity to ingest data into a centralized data warehouse
- Immediate focus on segmentation, processing and cleaning of all existing customer data, third party data append, segmentation analysis, and production of usable customer segments
- Development of LTV model and the ability to forecast LTV overall and by customer segments
- Integration of updated customer segmentation and LTV values into existing campaign segmentation, creative production, and conversion value modeling
- Acadia provide an initial analysis, and client may opt to refresh customer segments at a later date if desired as part of an additional scope of work

Fee: Initial effort will be $27,500.

- In addition to the project fee, Acadia can support the appending of the demographic segments to existing email newsletter subscribers. Generally these subscribers will only have an email address and in order to append the demographic segment, we will first need to append a physical address and then the household demographic data. This physical address information can be provided back to the client for any future use

Fee: $0.07 per record appended with physical address

Account Authorization:
Upon authorization of this agreement, Acadia will assign an account team and coordinate a formal client kickoff call, where we will send access requests and obtain necessary access to existing entities.

[ ] I agree to the terms and conditions set forth in the Statement Of Work:

Appendix

APPENDIX A

Technical and Organizational Security Measures for Acadia Data Platform

i. Acadia Security Certifications

The Acadia Data Platform meets the specific requirements of data protection, including, without limitation, Article 28 of the General Data Protection Regulation and which are listed as SOC2, Type 2.

At a minimum, Acadia has implemented for the Acadia Data Platform the technical and organizational measures and maintains security practices within the production environments described below. Please note that other business units within Acadia may have different Technical and Organizational Security Measures.

ii. Confidentiality Measures

A. Site Operations

Acadia's Data Platform resides in a data center and is managed by a third party who certifies annually under SOC2, Type 2.

B. Physical Security

a) The data center is protected through physically and logically secured card key systems and keypads with monitored security surveillance cameras positioned in key locations within the facility.

b) Intrusion detection and video surveillance are installed. Acadia may review video logs when issues or concerns arise to determine access.

c) Granting physical access to the data center requires management approval.

C. Environmental Security

1. Temperature and humidity levels of data halls are monitored and maintained at appropriate levels.
2. Emergency responders are automatically contacted when fire detection systems are activated. The design and function of fire detection and suppression systems is certified at appropriate intervals.
3. Physical Access Management to Acadia's corporate headquarters:
    1. Physical access is protected by secured card key systems located at all entrance points.

2. Employee physical access that is no longer required in the event of personnel termination or role change is promptly revoked. If applicable, temporary badges are returned prior to exiting facility.
3. Initial permission definitions, and changes to permissions, associated with physical access roles are approved by appropriate Acadia personnel.
4. User access to the Acadia Data Platform restricted to SSL VPN with multifactor authentication enforced.

4. Physical Access Reviews
    1. Acadia performs physical access account reviews on a quarterly basis, corrective action is taken where applicable.
5. Network Security
    1. Acadia maintains a dedicated Network Operations Center (NOC), which is staffed 24/7.
    2. Network traffic to and from untrusted networks passes through a policy enforcement point; firewall rules are established in accordance to identified security requirements and business justifications.
    3. Acadia uses IPSs, Firewalls and DMZ as layers of security. Antivirus is running on all employee laptops and all email traffic is scanned for malware. Additionally, real time antivirus scanning is enabled.
    4. Production environments are logically segregated from non-production environments.
6. Identity and Access Management of Acadia Personnel
    1. Logical access
        1. Logical access provisioning to information systems requires approval from appropriate personnel.
        2. Logical access that is no longer required in the event of a termination is documented, communicated to management, and revoked.
        3. Acadia performs account and access reviews on a quarterly basis, and corrective action is taken where applicable.
    2. Authentication
        1. Acadia creates unique identifiers for user accounts and prevents the reuse of identifiers. Account Login parameters follow these rules:
            1. Accounts are not shared.

2. Inactive sessions are password protected after 30 minutes.
3. Accounts are locked after 3 failed login attempts.

2. User and device authentication to information systems is protected by passwords that meet Acadia's password complexity requirements. Strong password configurations adhere to the following rules:
    1. Must be at least eight characters in length.
    2. Has at least one symbol and number.
    3. Has at least one upper and one lower case alpha character.
    4. Must be different than the previous 12 passwords.
3. Acadia requires system users to change passwords at least every 90 days.
4. Remote connections to the corporate network are accessed via VPN through managed gateways.

3. Role Based Access Control
    1. Initial permission definitions, and changes to permissions associated with logical access roles are approved by appropriate personnel.
    2. Access that allows modification to source code is restricted to authorized personnel.
    3. Acadia restricts the use of shared and group authentication credentials via the use of a shared secret solution. Authentication credentials for shared and group accounts are reset every 90 days.
4. Key Management
    1. Access to the cryptographic keystores is limited to authorized personnel.

7. Employee Management
    1. Background Checks and Non-Disclosure Agreements
        1. Acadia obtains pre-hire background check reports for employees accessing the Acadia Data Platform. The specific nature and scope of the report that Acadia typically seeks includes (as permitted by applicable law) may include:
            1. National criminal scan
            2. National sex offender registry
            3. Office of foreign assets control search
        2. Acadia hires employees based on a documented job description.

3. Employees are required to sign a Non-Disclosure Agreement upon employment. Acadia employees including contractors are required to sign an agreement that they will protect confidential information.

2. Training and Awareness

    1. Acadia personnel (including contract workers) who access the Data Platform complete security awareness training, which includes annual updates about relevant policies, standards, and new or modified attack vectors and how to report security events to the appropriate response team. Records of annual training completion are documented and retained for tracking purposes.

    2. Upon hire, Acadia fulltime and temporary employees and interns complete a code of business conduct training. Anyone who is found in violation of the Code of Business Conduct or other Acadia policies may be subject to disciplinary action including termination of employment or contract. Changes made to the Code of Business Conduct require signed acknowledgement by all fulltime and temporary employees, and interns.

8. Integrity, availability and resilience of processing systems

    1. Information Systems and Technology Management

        1. Production Configuration Management

            1. Acadia ensures security hardening and baseline configuration standards have been established according to industry standards and are reviewed and updated periodically.

            2. Installation of software or programs in the production environment requires approval by appropriate personnel.

        2. Change Management

            1. Change scope, change type, and roles and responsibilities are pre-established and documented in a change control workflow. Notification and approval requirements are also pre-established based on risk associated with change scope and type.

            2. Based on risk, prior to introducing changes into the production environment, approval from appropriate personnel is required based on the following:

                1. Change description is documented.

                2. Impact of change.

3. Changes to the production environment are implemented by authorized personnel only.

3. Data Transfer
    1. All management connections to Acadia servers occur over encrypted Secure Shell (SSH), Transport Layer Security (TLS), or Virtual Private Network (VPN) channels.
    2. Remote access via always requires two-factor authentication.
4. Security Governance
    1. Corporate Documents. Acadia's key business functions and information security capabilities are supported by documented procedures that are communicated to authorized personnel.
    2. Information Security Management. Acadia has an established governance framework that supports relevant aspects of information security with policies and standards.
    3. Security Leadership & Roles. Roles and responsibilities for the governance of Information Security within Acadia are formally documented and communicated by Management.
5. Data Platform Systems Monitoring
    1. Critical Information System Logs
        1. Acadia utilizes a centralized SIEM solution to aggregate and correlate logged events.
        2. To protect against unauthorized access and modification, Acadia captures firewall logs, network logs, operating system logs, application logs and intrusion detections events.
        3. Application user activity is logged by the application.
    2. Security Monitoring and Evaluation
        1. Acadia defines security monitoring alert criteria, how alert criteria will be flagged, and identifies authorized personnel for flagged system alerts.
        2. Acadia defines availability monitoring alert criteria, how alert criteria will be flagged, and identifies authorized personnel for flagged system alerts.
    3. System Design Documentation

1. Documentation of system boundaries and key aspects of their functionality are published to authorized Acadia personnel.

2. Service & Product Lifecycle
    1. Source code is reviewed for vulnerabilities prior to being released into production.
    2. All code changes are subject to Life Cycle Management, which requires acceptance via a defined workflow prior to implementation.
3. Vulnerability Management
    1. Information Systems and Technology
        1. Acadia conducts vulnerability assessments, assigns risk ratings to the discovered vulnerabilities, and tracks legitimate vulnerabilities through remediation. Vulnerability scan tools are updated prior to running scans.
        2. At least annually, Acadia will engage with a third party to perform penetration testing, assign risk ratings to discovered vulnerabilities, and track vulnerabilities through resolution.
        3. Acadia has managed enterprise antivirus deployments and ensures the following:
            1. Signature definitions are updated.
            2. Full scans are performed periodically, and real-time scans are enabled.
            3. Alerts are reviewed and resolved by appropriate personnel.
    2. Patch Management. Acadia installs security-relevant patches, including software or firmware updates in accordance with Acadia's patch management standard.

9. Measures for prompt recoverability and access to Customer Data

    1. Incident Response. Acadia has implemented a comprehensive incident response program that includes at least the measures below.

        1. Acadia defines the types of incidents that need to be managed, tracked, and reported. Such management includes the following:
            1. Procedures for the identification and management of incidents.
            2. Procedures for the resolution of confirmed incidents.
            3. Incident coordination and communication strategy.
            4. Support team contact information.

5. Notification to relevant Acadia management in the event of a security breach.
6. Provisions for updating and communicating the plan.
7. Preservation of incident information.
8. Management review and approval (either annually or when major changes to internal organization occur).

2. Acadia responds to confirmed incidents and resolution is tracked with appropriate management channels. If applicable, Acadia coordinates the incident response with business contingency activities.

10. Disaster Recovery and Business Continuity Plans

    1. Acadia maintains disaster recovery and business continuity plans and processes to allow for continuation of the services and to provide an effective and accurate recovery.

11. Processes for regular testing, assessing and evaluating the effectiveness of security measures

    1. Risk Management
        1. Acadia management performs an annual risk assessment. Results from risk assessment activities are reviewed to prioritize mitigation of identified risks.
        2. Management assesses the design and operating effectiveness of internal controls against the established controls framework. Corrective actions related to identified deficiencies are tracked to resolution.
        3. Management prepares a remediation plan to formally manage the resolution of findings identified in risk assessment activities.

12. Third Party Management

    1. On a periodic basis, management reviews controls within third party assurance reports to ensure that they meet organizational requirements. If control gaps are identified in the assurance reports, management addresses the impact that disclosed gaps have on the organization.
    2. Acadia performs a risk assessment to determine the data types that can be shared with a managed service provider.
